EASTES FAMILY GUEST COTTAGES

WE'RE GOING

green

Please note that Eersteposch is **100% powered** by the **sun** and not tied to the grid.

The good news is that we are **never affected** by load-shedding. The bad news is that there is always a possibility that the batteries might not be sufficient to provide an uninterrupted power supply **if not managed responsibly**.

To ensure that we can **sustainably provide** uninterrupted lights, hot water, Wifi connectivity and other luxuries, please be aware and support the following arrangements:

- We do not **iron** our linen to limit unnecessary use of electricity. We do provide high-quality, luxury linen for maximum comfort.
- We do not make use of **tumble-driers** for linen or towels.
- All geysers are on a **time switch** to ensure maximum use of sunlight hours and limit the unnecessary load on the power supply.
- We make use of **gas** for cooking and boiling water.
- Geysers are covered by electrical-saving **blankets** to prevent heat loss.
- All electrical equipment is **eco-friendly** and/or set on eco-friendly modes.
- Please try to use ovens, microwaves and hairdryers between **09:00 and 21:00** if possible.
- Please only use the **ECO setting** on the oven.
- Please use the **solar** and backup lights provided.
- Use the cosy **fireplaces** to provide heat and limit the use of towel rail warmers if possible.

Eco

Please talk to us if you have any special requests or need additional support to make your stay comfortable.

We look forward to the successful implementation of our **green energy systems** to save on utilities.
